

THE CHALLENGE

Your task is to **invent something that uses an Arduino** technology to solve a problem, help people, make life easier, or just do something really fun and creative.

An Arduino board is like a tiny, programmable computer that acts as the brain for electronic projects. It can be used to control lights, sounds, motors, sensors and loads more amazing technology. It can help inventions move, react, light up, make noises, or even interact with people!

One winning invention will be brought to life by the Kids Invent Stuff team using Arduino technology and displayed at Get up to Speed with STEM 2027... how amazing is that?!

TELL US ABOUT YOUR IDEA...

NAME:

AGE:

SCHOOL:

DRAW YOUR INVENTION IDEA:

Make sure you
add plenty of
labels and lots
of colour!

This project is brought to you by Kids Invent Stuff working in partnership with Arduino.
